This MotoCAP safety rating applies to:

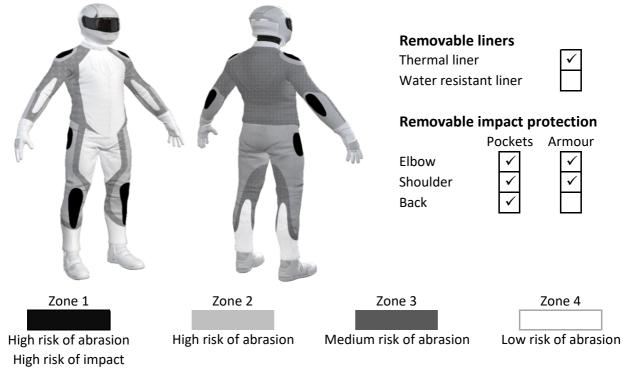

This garment is fitted with impact protectors for the elbows and shoulders. A pocket is provided for an aftermarket back protector. Replacing the elbow and shoulder armour with higher performing impact protectors would improve the protection levels of this garment. There are zipped vents in the chest and back to allow controlled airflow movement through the garment. The breathability rating is based on tests of the garment's materials when all vents are closed. The breathability of this product may be better when the vents can be opened. Breathability was measured without the removable thermal liner installed.

Thermal Resistance

Water resistance

# Jacket and Pants - Crash Impact Risk Zones

This diagram is a pictorial representation of the crash impact risk Zones.

0.381

44.0

1/10

### **Abrasion Resistance**

The jacket was tested for abrasion resistance in accordance with MotoCAP test protocols. The diagram below is a visual indication of the likely abrasion performance of the materials in each zone calculated from the data in the table below. The colour coding is based on the worst performing material in each zone.

Abrasion Resista	nce Performance
Abrasion rating	1/10

Abrasion rating	1/10
Abrasion score	0.87

Determining Criteria	Area	Good	Acceptable	Marginal	Poor
High abrasion risk	Zone 1 & 2	> 5.6	3.0 - 5.6	1.3 - 2.9	< 1.3
Medium abrasion risk	Zone 3	> 2.5	1.8 - 2.5	0.8 - 1.7	< 0.8
Low abrasion risk	Zone 4	>1.5	1.0 - 1.5	0.4 - 0.9	< 0.4

**Individual Abrasion Resistance Results:** - The table below shows the test results for time to abrade through all layers of the materials. Calculated for each sample by Zone, type and area coverage of each material as a proportion of that Zone. Abrasion times are capped at a maximum of 10.00s.

Zone 1 & 2	Coverage (%)	Sample 1	Sample 2	Sample 3	Sample 4	Sample 5	Sample 6	Average
Material A	100%	0.66	0.75	1.43	0.74	0.46	1.18	0.87
Zone 3	Coverage (%)	Sample 1	Sample 2	Sample 3	Sample 4	Sample 5	Sample 6	Average
Material A	100%	0.66	0.75	1.43	0.74	0.46	1.18	0.87
Zone 4	Coverage (%)	Sample 1	Sample 2	Sample 3	Sample 4	Sample 5	Sample 6	ا Average
Material A	100%	0.66	0.75	1.43	0.74	0.46	1.18	0.87

#### Details of materials used in jacket

Material A Woven fabric shell, water resistance layer and mesh inner liner

# **Burst Strength**

The jacket was tested for burst strength in accordance with MotoCAP test protocols. The diagram below illustrates the burst strength results in terms of the likely performance of the garment in an impact and is a pictorial representation of the data from the table below.

Determining Criteria	Unit	Good	Acceptable	Marginal	Poor
Burst strength	(kPa)	> 1000	800 - 1000	500 - 799	< 500

**Individual Burst Strength Results:** - The table below shows the burst pressure in kilopascals (kPA) for each sample tested by Zone and the average result for each zone.

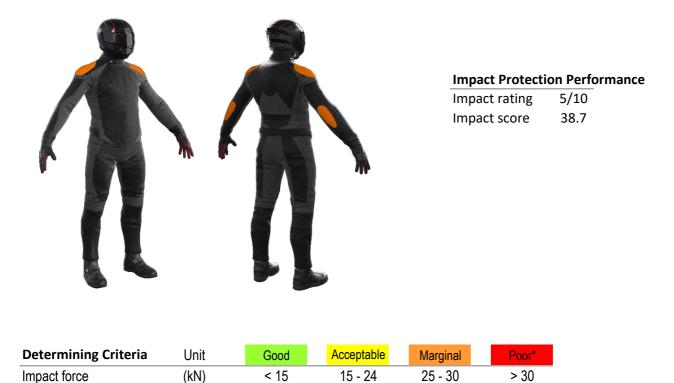

### Burst pressure for each seam (kPA)

Area	Sample 1	Sample 2	Sample 3	Sample 4	Sample 5	Sample 6	Average
Zones 1 & 2	1557	1830	385	1939	1680		1478 G
Zones 3 & 4	1699	1584	1629	1752	1259	1788	1618 G

### **Impact Protection**

The jacket was tested for impact protection and coverage in accordance with MotoCAP test protocols. The diagram below is a visual indication of the likely performance of each impact protector calculated from the data in the table below. The colour coding is based on the worst performing score for average or maximium force for each impact zone. Areas shaded black are not considered for impact protection ratings.

\* Poor may also indicate that no impact protector, or impact protector pocket is present in the garment

**Individual Impact Protector Results:** - The table below shows the test results for each strike on each impact protector in kilonewtons (kN) and their area of coverage as a proportion (%) of the Zone. Individual strike results are capped at a maximum of 50kN.

Impact protector type	Elbow		Shoulder
Average force (kN)	27.2	Μ	25.5 M
Maximum force (kN)	29.9	Μ	26.8 M
Coverage of Zone 1 area	140%		130%
Coverage of Zone after displacement	100%		100%

**Individual Impact Protector Results:** - The table below shows the test results for each strike on individual impact protectors in kilonewtons (kN) and the position of the strike. Individual strike results are capped at a maximum of 50kN.

#### Force transfer for each impact strike (kN)

Impact protector type	Elbow			Shoulder		
Strike location	Centre	Mid	Edge	Centre	Mid	Edge
Impact Protector 1	26.8	27.5	25.7	25.2	25.2	25.5
Impact Protector 2	25.6	28.3	29.9	26.4	24.6	26.3
Impact Protector 3	26.2	26.3	28.6	25.8	24.0	26.8

# Breathability

The jacket was tested for breathability following the MotoCAP test protocols. The table below shows the moisture vapour resistance and the thermal resistance values obtained.

Without removable I	iners	With water-resistant line			
Breathability rating	7	Breat	thability rating	N/A	
Breathability score	0.137	Breat	thability score	N/A	
Moisture Vapour Resis	stance - R <sub>et</sub> (kPa.m <sup>2</sup> /W)	1	2	Average	
Without removable liner	S	192.2	141.8	167.0	
With water-resistant line	r	N/A	N/A	N/A	
Thermal Resistance - I	R <sub>ct</sub> (K.m²/W)	1	2	Average	
Without removable liner	S	0.382	0.381	0.381	
With water-resistant line	r	N/A	N/A	N/A	

# Water spray and rain resistance

This jacket is advertised as water-resistant, and so has been tested for water spray and rain resistance according to the MotoCAP test protocols. The table below shows the water absorbed (ml) and the wetting proportion (%) of the garment and undergarments due to water absorption.

	Water absorbe	ed by garment	Water absorbed by underwear		
	Volume (ml)	Percentage (%)	Volume (ml)	Percentage (%)	
Jacket 1	336	20%	115	40%	
Jacket 2	390	24%	136	48%	
Average	363	22%	125	44%	

#### Location of wetting

There was major wetting to the cotton underwear present at the neck and chest and minor wetting at the cuffs of the sleeves and back for both jackets tested.
