This MotoCAP safety rating applies to:

Argon

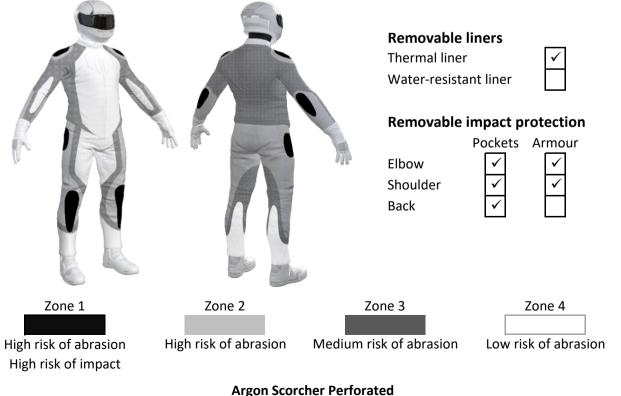

Brand

This garment is fitted with impact protectors for the elbows and shoulders. A pocket is provided for an aftermarket back protector. Perforated leather is located in the arms, chest and back to allow airflow movement through the garment. Breathability was measured without the removable thermal liner installed.

Abrasion Resistance

The jacket was tested for abrasion resistance in accordance with MotoCAP test protocols. The diagram below is a visual indication of the likely abrasion performance of the materials in each zone calculated from the data in the table below. The colour coding is based on the worst performing material in each zone.

| Abrasion rating | 4/10 |
|-----------------|------|
| Abrasion score | 3.01 |

| Determining Criteria | Area | Good | Acceptable | Marginal | Poor |
|-----------------------------|-------------|-------|------------|-----------|-------|
| High abrasion risk | Zones 1 & 2 | > 5.6 | 3.0 - 5.6 | 1.3 - 2.9 | < 1.3 |
| Medium abrasion risk | Zone 3 | > 2.5 | 1.8 - 2.5 | 0.8 - 1.7 | < 0.8 |
| Low abrasion risk | Zone 4 | >1.5 | 1.0 - 1.5 | 0.4 - 0.9 | < 0.4 |

Individual Abrasion Resistance Results: - The table below shows the test results for time to abrade through all layers of the materials. Calculated for each sample by Zone, type and area coverage of each material as a proportion of that Zone. Abrasion times are capped at a maximum of 10.00s.

Abrasion time for each test (seconds)

| Zones 1 & 2 | Coverage (%) | Sample 1 | Sample 2 | Sample 3 | Sample 4 | Sample 5 | Sample 6 | Average |

Burst Strength

The jacket was tested for burst strength in accordance with MotoCAP test protocols. The diagram below illustrates the burst strength results in terms of the likely performance of the garment in an impact and is a pictorial representation of the data from the table below.

Burst Strength PerformanceBurst rating10/10Burst score1019

| Determining Criteria | Unit | Good | Acceptable | Marginal | Poor |
|-----------------------------|-------|--------|------------|-----------|-------|
| Burst strength | (kPa) | > 1000 | 800 - 1000 | 500 - 799 | < 500 |

Individual Burst Strength Results: - The table below shows the burst pressure in kilopascals (kPA) for each sample tested by Zone and the average result for each zone.

Burst pressure for each seam (kPA)

| Area | Sample 1 | Sample 2 | Sample 3 | Sample 4 | Sample 5 | Sample 6 | Average | |

Impact Protection

The jacket was tested for impact protection and coverage in accordance with MotoCAP test protocols. The diagram below is a visual indication of the likely performance of each impact protector calculated from the data in the table below. The colour coding is based on the worst performing score for average or maximum force for each impact zone. Areas shaded black are not considered for impact protection ratings.

| Determining Criteria | Unit | Good | Acceptable | Marginal | Poor* |
|----------------------|------|------|------------|----------|-------|
| Impact force | (kN) | < 15 | 15 - 24 | 25 - 30 | > 30 |

* Poor may also indicate that no impact protector, or impact protector pocket is present in the garment

Impact Protector Results: - The table below shows the average and maximum force transmitted through each impact protector type in kilonewtons (kN) and their area of coverage as a proportion (%) of the Zone.

| Impact protector type | Elbow | | Shoulder |
|-------------------------------------|-------|---|----------|
| Average force (kN) | 20.3 | A | 18.9 A |
| Maximum force (kN) | 23.5 | A | 21.1 A |
| Coverage of Zone 1 area | 130% | | 105% |
| Coverage of Zone after displacement | 100% | | 100% |

Individual Impact Protector Results: - The table below shows the test results for each strike on individual impact protectors in kilonewtons (kN) and the position of the strike. Individual strike results are capped at a maximum of 50kN.

Force transfer for each impact strike (kN)

| Impact protector type | Elbow | | | Shoulder | | |
